Step-by-step: Push updated code to GitHub

1 Make sure you're inside your project folder

In VS Code terminal:

```
cd E:\transcript_project
```

---

2 Check your Git status

This shows what has changed:

```
git status
```

You'll see lines like:

```
modified: templates/home.html
new file: static/css/style.css
```

---

3 Add your changes

```
git add .
```

The `.` means "add everything that changed."

---

4 Commit your changes with a message

```
git commit -m "Updated transcript form and fixed template bugs"
```

💡 You can write any short message describing what changed.

---

5 Push to GitHub

If your branch is called **main**:

```
git push origin main
```

If your branch is called **master**:

```
git push origin master
```
